

UNIMUS™ UNIFIED ENTERPRISE FRAMEWORK

As established Cloud or Infrastructure-as-a-Service ("IaaS") providers continue to advance, financial technology consumers are realizing that they need to create similar offerings to remain relevant. Hence, they are increasingly looking to technology providers to arm them with the tools that are now required to compete.

HPR's Unimus provides a highly unified platform and framework that vastly improve operation efficiencies at every level:

- PRICE:** Unimus spans all deployment types (high to low end), providing optimal price/performance
- PERFORMANCE:** Renders high-performance computing (HPC) applications, maximizing per-server output
- RELIABILITY:** All Unimus applications are fault tolerant, providing integrated high availability when required
- SCALABILITY:** All applications support vertical stacking for infinite scalability

Legacy data centers are often comprised of a hodge-podge of various hardware components, software applications, and innumerable network and storage solutions.

UNIMUS™

HPR's Unimus platform and associated framework provide a unified, homogeneous deployment. From low to ultra-low latency, hardware to software, front- to back-office applications, HPR is building the future Infrastructure-As-A-Service model for its clients.
